**Wpscan Tutorial**
Wpscan has been written on ruby so you can use it on cross operating system like Linux, Windows and others, however it has been written and tested on backtrack 5 GNOME. You have to install some dependencies on the terminal type

```
sudo apt-get install libcurl4-gnutls-dev
```
sudo gem install -user-install typhoeus
sudo gem install -user-install xml-simple

The usage is very simple

ruby wpscan.rb -url www.example.com
ruby wpscan.rb -url www.example.com -wordlist darkc0de.lst -threads 50

Video Tutorial of Wpscan

Note: If you want to learn more about Linux and Windows based Penetration testing, you might want to subscribe our RSS feed and Email Subscription or become our Facebook fan! You will get all the latest updates at both the places.
